Identification

MEI Automatic Slack Adjusters (ASA) and Self-setting Automatic Slack adjusters (S-ASA) are identified by the part number which is marked on the cover plate (see below). After a long life in service or while still on the vehicle, it can be difficult to read the information on the cover plate. Therefore the measurements on the following page can be taken to assist identification.

The cast housing has an identification mark. For most MEI ASA this begins with T (eg T-32) and for most MEI S-ASA this begins with S (eg S-43). In the case of the example part number below, the 4W1445, the identification mark is T-1A.

In addition, the cast housing might also display an arrow (bottom right image). The arrow indicates the direction of operation.

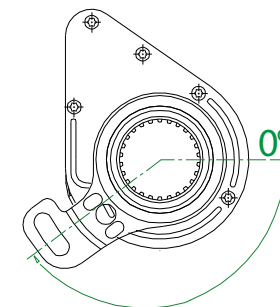

<b>4W1130</b>	<b>QAS N/A</b>	<b>4175015000</b>
Automatic	Trailer	SAF
Axle Side: R	Other Side: 4W1135	
Supplied With: N/A	Inclination: (°) -30	Offset: (mm) +25
Replaces: 79318		
Control Arm: Type: AP Length: 78mm Angle: 90°		
Bush (mm) 14	Spline: 10	
Holes: 127 152 178		
3 Year Warranty KBA61251 QAS N/A		

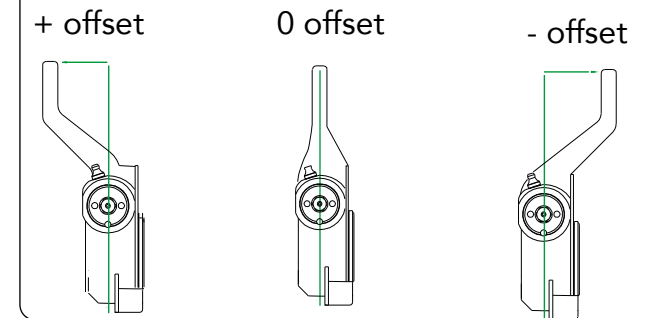

The number of teeth on the worm wheel which mates with the camshaft can be counted. In the case of the 4W1130 the spline has 10 teeth.

The clevis bush internal diameter can be measured. In the case of the 4W1130 it is 14mm.

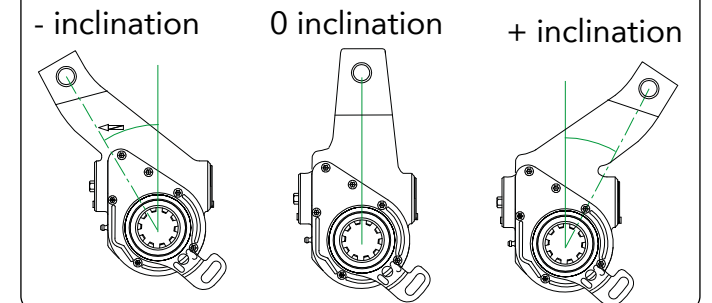

On MEI ASA the control arm angle can be checked. In the case of the 4W1130 the control arm angle is 90 degrees. For S-ASA (6Y) this is Not Applicable as the control arm will work from any position within the working arc of the control arm.

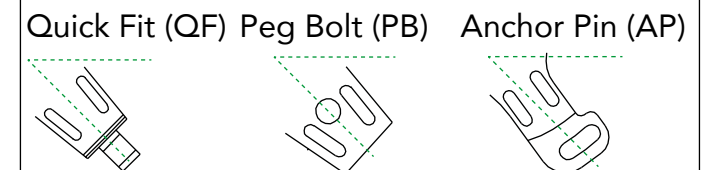

The cast housing can be straight or offset. In the case of the 4W1130 we can see that it is +25mm.

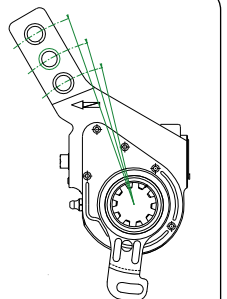

The cast housing can also be straight or inclined. In the case of the 4W1130 it is -30.

On both ASA and S-ASA the Anchor Point type will be Quick-Fit (QF), Peg Bolt (PB), or Anchor Pin (AP). The 4W1130 Anchor Point type is Anchor Pin (AP).

The distance from the centre of the worm wheel to the centre of the clevis hole can be checked. The hole distances for the 4W1130 are 127mm, 152mm and 178mm.
